

This report describes cases of measles that lived in the Southwestern Public Health (SWPH) region at the time of their illness, including the City of St. Thomas, Elgin County or Oxford County. The number of cases reported to SWPH is an underestimate of the true number of measles cases within the region. Not everyone with measles may seek testing or medical care. The information presented below represents one point in time and may change as case investigations progress or data cleaning occurs to improve data quality.

Measles is circulating across many regions within and outside of Ontario. If you think you've been exposed to measles, you can complete this [risk assessment tool](#) for guidance on next steps.

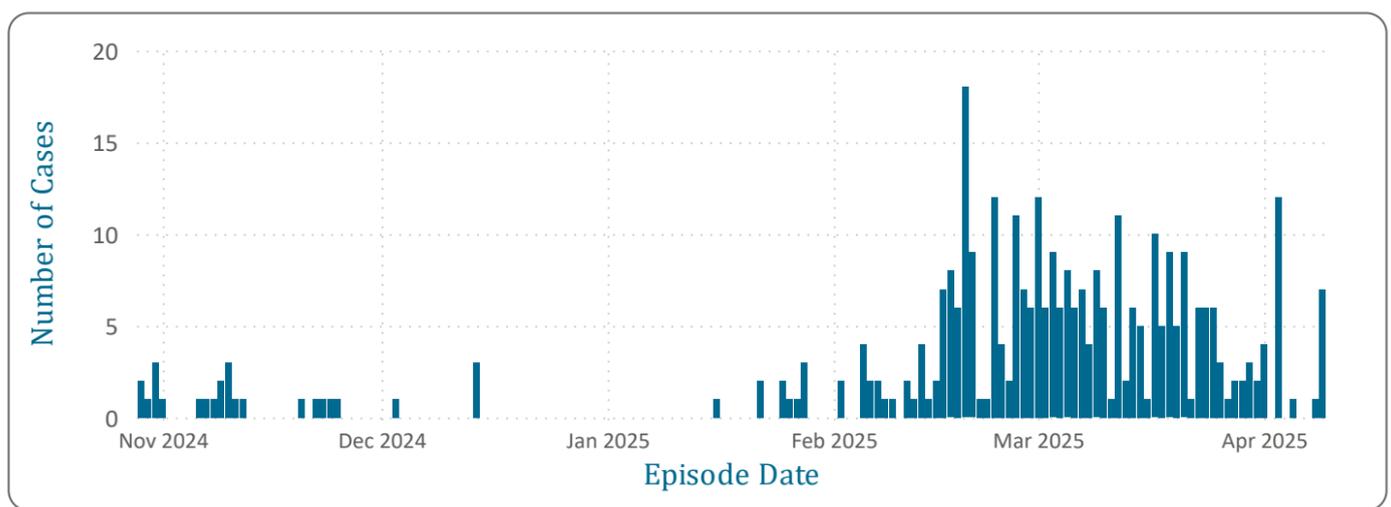

Case Counts

Total number of cases reported to SWPH since October 2024:

343

Number of cases reported to SWPH in the past 7 days:

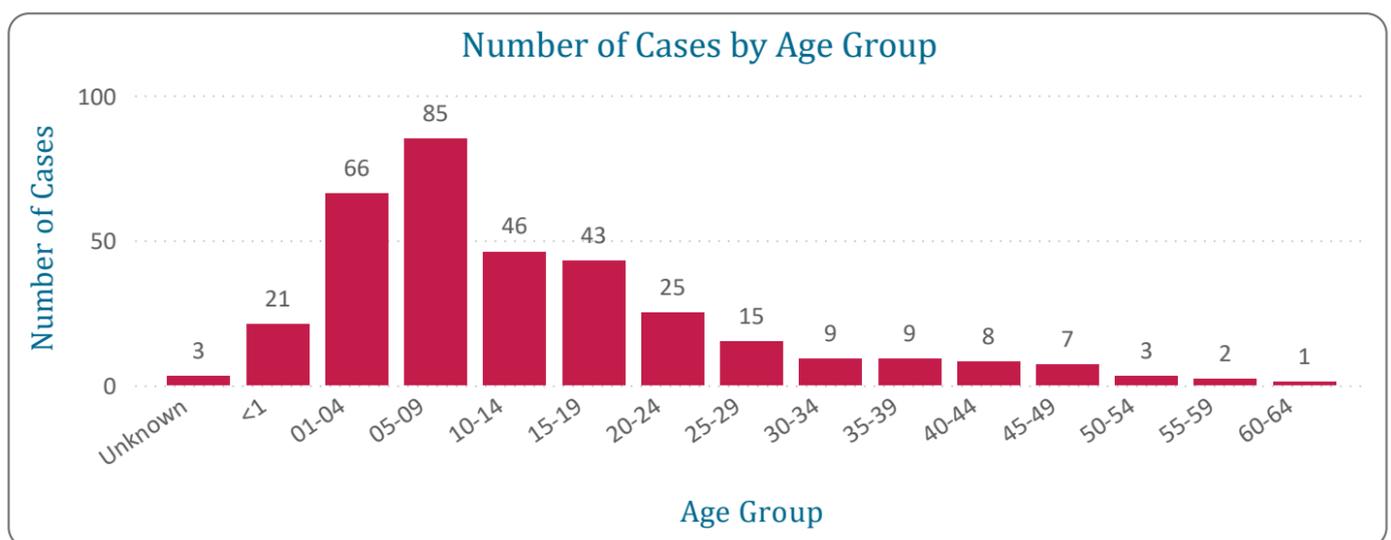

35

Age of Cases

Proportion of cases that are 18 years of age or younger:

73.8%

Severity of Illness

Proportion of cases that were admitted to the hospital during their illness:

9.0%

Immunization Status of Cases

Unimmunized

82.6%

Partially immunized (1 dose)

2.7%

Fully immunized (2 or more doses)

6.1%

Unknown/No proof of immunization

8.5%
