Virtual Visits: Your Health is Our Priority

As recommended by the Chief Medical Officer of Health, this health care practice now provides virtual visits to patients.

Access your primary care provider team through virtual visits, while reducing the risk of spreading illnesses to you, other patients, and staff.

What to expect from a virtual visit:

- Timely care for you and your family
- Private and secure consultation through phone, video or email
- Currently covered by OHIP with valid health cards
- Manage concerns that may not require an exam
- Screening to determine if an in-person appointment is required

Contact your primary care provider if you have any questions.
